

KANMED^o

NEWS 2017

**in warming and caring for the new-born:
An improved system, absolutely unique!**

KANMED^o BABYBED

No other manufacturer on the market offers at this moment a baby bed that is so well adapted to the needs of the new-born and of the caregivers.

Available in 8 different versions, with multiple accessories: single or for twins, electrical or with fixed height, with or without side rails, 4 models of tent, up to 3 storage boxes.

KANMED^o BABYWARMER

This optimal warming ensures growth rates that are equal to or better than most incubators, for premature or near-term babies.*

The system imitates the touch of mother's skin**, thereby heart rate, breathing rate, O₂ saturation and body temperature become stable.

Only a soft warm water mattress can substitute the warming efficiency of a modern incubator!

*Recommended for premature or near-term babies, or underweight babies born at term, who are stable and do not need treatment in the incubator.

**The "Kangaroo mother care" concept.

KANMED BABY WARMING SYSTEM

Unique benefits for the premature baby:

- Optimal warming** – following the concept of "Kangaroo mother care"
- Weight gain** – ensured by the safe, protective and comfortable environment
- Breast feeding** – due to ergonomic features that eliminate impediments
- Strong bonding** – by facilitating parents' access to the baby
- Reduced hospitalization** – due to rapid weight growth

Remarkable benefits for the care facility:

- Reduced costs for acquisition** – compared to an incubator
- Reduced expenses in use** – for functioning and maintenance
- Reduced costs for hospitalization** – the new-born leaves the hospital earlier
